

**ABSTRACT OF THE DISCLOSURE**

**Abstract of the Disclosure**

The invention relates to a novel method for producing a metal/ceramic substrate, which is characterized by applying at least one metal area to at least one top surface of a ceramic layer. At least one metal area is applied to at least one surface side of a ceramic layer, wherein the ceramic layer is heated in a thermal process step in an area not covered by the metal area along a separating or break-off line.
